The parallel vulcanization of natural rubber and of
polyisobutylene rubber through tetramethylthiuramdi-
sulfide in the presence of ZnO_2 and stearic acid were
studied by a radiospectrometer with high sensitivity
(2×10^{-12} mole of diphenylpicrylhydrazyl). The elec-
tron paramagnetic spectra found in natural rubber
vulcanization through tetramethylthiuramdisulfide
indicate a radical character of the reactions. No spec-
tra were detected for the polyisobutylene rubber.
